

Flow-Liner®

**“Keeping your Drains Healthy”
With a Pipe Lining Technology Answer**

History:

Located in the heart of Cambridge, Ohio, Southeastern Med provides some of the most cutting-edge medical treatments available in the area. The hospital offers a full suite of cancer services, along with joint replacements, cardiac care, vascular intervention, emergency services, and much more.

Problem:

Southeastern Med had a leaking storm drain that, during heavy rains, would flood their basement. Over 100' of pipe, including many bends along the way, needed lining.

Before Flow-Liner Cured in Place Pipe Lining Installation

After Flow-Liner Cured in Place Pipe Lining Installation

Solution:

Cleaning of approximately 100' of 8" cast iron and 10" clay tile storm sewer pipes, followed by installation of Flow-Liner Cured in Place Pipe Liner.

“Your technicians worked well with us to ensure minimal interruptions and intrusions into our operations.”

We are pleased to announce another successful project and proudly add

Southeastern Med

to our list of happy and satisfied customers.
