

# Flow-Liner®

## “A Modern Living”

### With A Pipe Lining Technology Answer

#### Problem/Issue

The MODERN is a condo complex of 9 buildings located in Las Vegas, Nevada. Originally built in 2007, the facility recently underwent renovations to the condo units. It was later identified that during construction nails and screws had penetrated thru the PVC roof drains causing the roof drains to leak and potentially damage the newly renovated condo units. Replacement of the roof drains was not an option since it would have involved tearing open newly renovated walls and cabinets.

Flow-Liner®  
Equipment Set-up

#### Solution

Using Flow-Liner® technology, a Flow-Liner Certified Installer prepared the roof drains and installed the Flow-Liner® Cured-in-Place Pipe Lining System using specialized procedures.

#### Results

The roof drains were successfully lined with no disruption to the facility or its occupants. The President of the Modern Homeowner Association was very pleased with the results and commented:

*“We are very pleased with how the Flow-Liner installation was performed by your Installer. The pipe lining saved us from having to tear open walls and replace the piping, which would have been very costly and inconvenient. We highly recommend your product and consider it a viable option compared to pipe replacement.”*
